Module Mobilisatie

Inhoudsopgave

Uitgangsvraag	3
Methode	3
Bijlage 1. Table of excluded studies	4

Uitgangsvraag

Onder welke voorwaarden mag een geïsoleerde cliënt mobiliseren buiten de eigen kamer?

Methode

Onderzoeksvraag

Om de uitgangsvraag te beantwoorden is een systematische literatuuranalyse verricht. De onderzoeksvraag die hiervoor is onderzocht is PICO-gestructureerd en luidt:

Wat zijn de positieve en negatieve effecten wanneer een cliënt geïsoleerd wordt in de cliëntenkamer?

P	Patients in isolation
I	Staying in own room
C	Not staying in own room
O	Outbreaks, length of hospital stay, adverse events

Relevant outcome measures

The guideline development group considered outbreaks, length of hospital stay and adverse events as a critical outcome measure for decision making.

A priori, the working group did not define the outcome measures listed above but used the definitions used in the studies.

Search and select (Methods)

The databases Medline (via OVID) and Embase (via Embase.com) were searched with relevant search terms until 13-6-2022. The systematic literature search resulted in 1049 hits. Studies were selected based on the following criteria: reporting on mobilization of the patient whilst in isolation. Thirty-seven studies were initially selected based on title and abstract screening. After reading the full text, all studies were excluded, and no studies were included.

Results

Not applicable.

Description of studies

Not applicable

Results

Not applicable

Level of evidence of the literature

Not applicable

Conclusions

no GRADE	No evidence was found regarding the effect of a patient, with an indication for isolation, leaving the room, on transmission, outbreaks, length of hospital stay or adverse events when compared to staying in his own isolation room.
